Publication Title:

Display medium.

Abstract:

Abstract of EP0460314

A display medium providing a 2-D image representing a 3-D scene wherein specular reflection of light from the 3-D scene is simulated by causing, at each one of a plurality of locations, light leaving the display medium to have maxima in its intensity as a function of direction for at least one direction, corresponding to a direction in which light would be specularly reflected from the part of the 3-D scene represented by the 2-D image at that location.
